Skills

Agile | Azure | DevOps | Kanban | Change Management | CI/CD | SQL | GitHub | Quality Assurance |
Scrum | Visual Studio | Management | SOC2 | ISO | IT Administration | SDLC | .NET

Experience

Software Release Manager - *MarketStar*   April 2019 - Present
Ogden, UT
- Create, build and release pipelines for web and console application deployments (CI/CD).
- Deploy applications to development, staging, and finally production environments.
- Work closely with product managers, developers, and users to help the flow of the Software Development Lifecycle (SDLC).
- Own and orchestrate the change management process by hosting weekly meetings with CAB (Change Advisory Board) members.

Application Specialist - *MarketStar*   April 2018 - April 2019
Ogden, UT
- Test new software updates and releases developed and maintained by the company and third-party affiliates.
- Work as an administrator for Corporate Systems helping to onboard new employees, troubleshoot issues with logging in, expense reporting, time card tracking, enabling and disabling access and permissions to various sites and applications.
- Help maintain quality in Marketstar's websites which are used by all employees and managers to track hierarchy, roles, seats, employment information, employee personal information, recruiting, etc.

QA Engineering Mentor - *DevMountain*   October 2017 - April 2018
Salt Lake City, UT
- Teach QA principles, concepts, and automation to students.
- Help to improve curriculum while collaborating with the lead instructor.

Projects

Private Software CI/CD - Withholding names for privacy and adherence to non-disclosure agreements.
- Create build and release pipelines in Azure DevOps that manually or automatically run tests, compile, and deploy code. These pipelines are able to run scripts from multiple repositories, automatically update software versions, update NuGet package versions, etc.

Change Management Documentation
- Design a semi-automated change order form with specific requirements from stakeholders and auditors. Thereby, saving a lot of manual tracking, paperwork, and money since it replaced the third-party software previously in use. Traceability also increased for each step of change.

Infrastructure Assisting
- Security updates, IIS configurations, event logs, load balancing, mirroring staging environment with production.

Education

DevMountain Student Developers   October 2017 - April 2018
Salt Lake City, UT (ISTQB Certification and Skill Badges)
